WARNINGS

- Do not modify or use product outside its intended use and application. Misapplication can result in damage or product failure.
- Only use parts and hardware included. If parts are missing, contact etrailer at 800-298-1624 for replacement(s).
- Always check for damaged or worn parts before use. Broken parts will affect operation. Replace or repair damaged or worn parts immediately.

INSTALLATION

1. This toolbox is designed for permanent installation on the tongue of your A-frame trailer. The installation process requires precise measurement, drilling, and application-specific hardware (not included). It is recommended to have a qualified service technician complete the installation.
2. Hardware for mounting the toolbox is sold separately and may vary based on your trailer's design. Here are some suggestions to assist with the installation:
 - a. Place the toolbox on top of the trailer tongue. It should be attached to the trailer tongue at four points, one at each corner of the bottom of the box. Holes will need to be drilled in these locations.
 - b. Ensure there are no hidden cables or wires underneath your trailer tongue where you plan to drill.
 - c. Measure the exact locations for the four mounting holes inside the box, then remove the box from the trailer tongue.
 - d. Drill small guide holes (approx. 1/8" in diameter) into the desired mounting areas on the inside bottom of the box.
 - e. Place the toolbox back on the trailer tongue in the desired location. Using the guide holes, mark the positions for the drill holes on the trailer tongue. Drill holes of appropriate size for your chosen hardware.
 - f. On the inside bottom of the toolbox, enlarge the guide holes slightly to accommodate the hardware for your specific application.
 - g. With all holes drilled, reposition the toolbox on the trailer tongue. Secure the toolbox using thread-cutting screws or self-tapping screws, depending on your trailer's application. Securely tighten all screws.

MAINTENANCE

1. Frequently check the condition of the toolbox. Make sure all components are in good condition. If the product becomes damaged through accident, or if any weld damage is noted, the product should be replaced.
2. Check to make sure that all hardware is tightly secured in place.
